

TPN Day 1

Birth weight: 2 kg

TFG: 60 mL/kg/day

Enteral (oral + NG): 0 mL/kg/day *Starting? Probably NPO*

$$60 - 0 = 60 \text{ mL/kg/day}$$

IV Infusion rate (TPN rate):

60 mL	2 kg	1 day
kg day		24 hours

$$= 5 \text{ mL/hr}$$

TPN Day 2

- Advance TFG by 20 mL/kg/day
- Add IntraLipid (SMOF)

Birth weight: 2 kg

Current weight: 1.97 kg

TFG: 60 + 20 = 80 mL/kg/day

Enteral (oral + NG): 0 mL/kg/day

SMOF, 1g: 5 mL/kg/day

$$80 - 0 - 5 = 75 \text{ mL/kg/day}$$

IV Infusion rate (TPN rate):

75 mL	2 kg	1 day
kg day		24 hours

$$= 6.25 \text{ mL/hr} \rightarrow 6.3 \text{ mL/hr}$$

(Continue to use birth weight until current weight > BW)

TPN Day 3

- Advance TFG by 20 mL/kg/day
- Start trophic feeds (20 mL/kg/day)
- Advance SMOF to 2 g

Birth weight: 2 kg

Current weight: 1.95 kg

TFG: 80 + 20 = 100 mL/kg/day

Enteral (oral + NG): 20 mL/kg/day

SMOF, 2g: 10 mL/kg/day

$$100 - 20 - 10 = 70 \text{ mL/kg/day}$$

IV Infusion rate (TPN rate):

70 mL	2 kg	1 day
kg day		24 hours

$$= 5.83 \text{ mL/hr} \rightarrow 5.8 \text{ mL/hr}$$

Amount per enteral feed:

20 mL	2 kg	1 day
kg day		8 feeds

$$= 5 \text{ mL/feed}$$

TFG: Total Fluid Goal

TFI: Total Fluid Intake

BW: Birth Weight

NG: Nasogastric tube

SMOF: Soy-MCT-Olive-Fish (increments of 1 g; 1 g = 5 mL/kg)

TPN Day 4

- Advance TFG by 20 mL/kg/day
- Advance feeds (20 mL/kg/day)
- Advance SMOF to 3 g (max)

Birth weight: 2 kg

Current weight: 1.97 kg

TFG: 100 + 20 = 120 mL/kg/day

Enteral (oral + NG): 40 mL/kg/day

SMOF, 3g: 15 mL/kg/day

$$120 - 40 - 15 = 65 \text{ mL/kg/day}$$

IV Infusion rate (TPN rate):

65 mL	2 kg	1 day
kg day		24 hours

$$= 5.42 \text{ mL/hr} \rightarrow 5.4 \text{ mL/hr}$$

Amount per enteral feed:

40 mL	2 kg	1 day
kg day		8 feeds

$$= 10 \text{ mL/feed}$$

TPN Day 5

- Advance TFG by 20 mL/kg/day
- Advance feeds (20 mL/kg/day)
- Stop SMOF

Birth weight: 2 kg

Current weight: 1.99 kg

TFG: 120 + 20 = 140 mL/kg/day

Enteral (oral + NG): 60 mL/kg/day

SMOF: 0 mL/kg/day

$$140 - 60 - 0 = 80 \text{ mL/kg/day}$$

IV Infusion rate (TPN rate):

80 mL	2 kg	1 day
kg day		24 hours

$$= 6.67 \text{ mL/hr} \rightarrow 6.7 \text{ mL/hr}$$

Amount per enteral feed:

60 mL	2 kg	1 day
kg day		8 feeds

$$= 15 \text{ mL/feed}$$

TPN Day 6

- Advance TFG by 20 mL/kg/day
- Advance feeds (20 mL/kg/day)

Birth weight: 2 kg

Current weight: 2.2 kg **Exceeds BW!**

TFG: 140 + 20 = 160 mL/kg/day

Enteral (oral + NG): 80 mL/kg/day

$$160 - 80 = 80 \text{ mL/kg/day}$$

IV Infusion rate (TPN rate):

80 mL	2.2 kg	1 day
kg day		24 hours

$$= 7.33 \text{ mL/hr} \rightarrow 7.3 \text{ mL/hr}$$

Amount per enteral feed:

80 mL	2.2 kg	1 day
kg day		8 feeds

$$= 22 \text{ mL/feed}$$

Day 7

- TFG at goal
- Advance feeds (20 mL/kg/day)
- Stop TPN because enteral is now at 100 mL/kg/day
